Mini Project

Topic: BANK SYSTEM AND ITS FUNCTIONS

<u>Aim</u>: To write a program that performs the functions of a BANK for respected personnel and provide them with various function to operate with.

Algorithm:

- 1. Start
- 2. Define variables users, pins, amounts
- 3. Checks the given name is correct or not. If correct, move to step 4
- 4. Checks the pin entered is correct or not. If correct, move to step 5, if not move to step 3
- 5. Print various functions to operate with like:
 - Statement in the bank
 - Withdraw the amount
 - Deposit the amount
 - Apply for Loan with EMI
 - Apply for Credit/ Debit Card
 - Change the pin of their ATM card

- 6. If the enter credentials are correct, it performs and print the required result, if not it re-enters the details, till it gets the correct details.
- 7. If the option = 'QUIT', then the program terminates
- 8. END.

Methodology:

The given program works and performs on the looping functions provide by Python.

Loop used in the given program:

- While loop
- Nested if loop

Output:

```

Result:

The desired result has been attained.

The program works for every application provided by a bank that are practical in nature.

Conclusion:

While developing the program we as a student learned several things about computer science as well as about the functioning of a bank that the facilities that are provided within it. The program helped us in how to connect to loop function through which the desired result was attained for respected personnel. The project also helped us to develop a program that solved a real-life problem in a real-life scenario and effectively work to solve daily life problem.
